

Instructions for using the provisional LaTeX model for the writing of the thesis document.

It should be noted that this version is not finalized and not validated by the "Ecole des docteurs"(EDD). This is an interim version that is currently being tested and is provided to you on an emergency basis to respond to repeated requests. For example, this template is only valid for ED MathSTIC and all Logos of all ED MathSTIC institutions are not yet available. However, the coverage is the same as Word templates. In principle, the template contains the necessary comments so that the PhD student can complete it according to his needs waiting for the full version finalized and validated by the EDD in September.

Some indications:

- main.tex generates the main.pdf file and thus the final document
- the cover is in the " couverture-these " file which contains 2 latex files: "pagedegarde.tex" (for the cover page) and "résumé.tex" (for the end summary of the manuscript)
- comments (starting with"%") in French and English are indicated in the LaTeX files
- logos are in the " couverture-these " directory
in a subdirectory "mathSTIC" (name of the doctoral school) containing the "mathSTIC theme".
in a "logo-etablissement" subdirectory containing the different logos.
- the color of the "mathSTIC-Color" doctoral school has been defined in the "these-ubl.cls" class in which the different parameters have been defined (size of the logos, location of the cover information, definition of the different packages...).
- the ED MathSTIC PhD student does not have to modify the "these-ubl.cls" class file.
